

Where TTF Has Already Made a Difference

The TTF has already helped dozens of businesses and designers get new products of the ground. Here are just a few...

- FingerPIN Limited, based at Aston Science Park, has created a security system for entering your PIN when paying for goods that cuts the risk of fraud or hacking from around 1:10,000 to 1:10 billion
- CCBT Ltd, was awarded £25,000 to help research a new on-line programme – effectively a computer therapy course – to help those who suffer from stress and other phobias tackle the issue and return to work
- Ferris-Tech Ltd, based in central Birmingham, has created a new ‘bait bomb’, using the latest plastic injection moulding, to allow fishermen to cast and manoeuvre the line exactly where they want it, before the bait is released
- EcoBoard Ltd, based in Bromsgrove, have been awarded £25,000 to help research and develop high density particle board out of urban waste wood. The final product is strong enough to be used in the construction industry
- Other ideas being developed include an anti-wrinkle treatment using the latest nanotechnology, a device to measure haemoglobin levels instantly and a new antenna to allow improved wireless broadband connections on trains
